DETAILED ACTION

Allowable Subject Matter

1. Claims 1-24 are allowed.

Drawings

2. The application having been allowed, formal drawings are required in response to this Office action.

Specification

3. This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.

Reasons for Allowance

4. The following is an examiner's statement of reasons for allowance:

The closest prior art of record issued to Anderson et al (US Patent 5,818,328) fails to suggest an RF amplification system comprising at least a portable remote unit including a microphone, a central processing unit, a transmitter, an antenna, and a receiver; and the base unit including an antenna, a receiver for detecting the first RF signals and separating the first RF signals into the voice signals and the control signals; a communication interface, a code detector,

Art Unit: 2684

a central processing unit, and a transmitter for generating the second RF signals containing control signals but no voice signals, said second RF signals being transmitted to the portable unit via the antenna of the base unit, thereby effecting one-way transmission of voice signals (from the remote unit to the base unit) and two-way transmission of control signals between the portable remote unit and the base unit as applied in the field of classroom amplification as recited in further details in claims 1 and 14.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Alberth, Jr. et al (US Patent 5,589,796) disclose method and apparatus for increasing amplifier efficiency.

Usui (US Patent 5,239,683) discloses a cellular telephone system capable of reducing IM distortion at portable telephone.

Afrashteh et al. (US Patent 5,426,641) disclose adaptive class AB amplifier for TDMA wireless communications systems.
